

I strongly believe that robots should not be a part of our future.....

Firstly, humans will not be working because robots will replace us. Families need to work to pay for stuff and if we can't work we won't have a roof over our heads.

Secondly, humans have always worked so it would be a shame to see that go away. Also what would be the point of going to school if there were no more jobs left for humans.

Lastly, robots are already doing massive tasks like playing soccer, working in the army and much more. Robots are ruining the world all because someone wants to make money. We need to stop this now.

## *Persuasive Writing in 4/5W*

I strongly believe that we should terraform Saturn instead of Mars.....

Firstly, we all know that Saturn is a long, long, long way away but if we manage to get there we have Enceladus right there! Enceladus is one of Saturn's many moons which emits 63,000 gigatons of energy each Earth day so we could power civilisations all over the solar system, even though Mars is closer and Saturn is an Asteroid belt and a Jupiter away. And guess what..... we can even study Saturn close up!

Secondly, any virus or sickness brought upon Saturn will be killed. Imagine walking along the street and catching a mild flu virus. Well fear no more only once we are on Saturn, (Saturn is usually  $-169^{\circ}\text{F}$ ), any virus brought upon Saturn will die because the temperature is extremely cold. Brrrrr!

Lastly, if we can get enough power (from Enceladus) and enough resources (from Saturn and other planets) we might be able to repair Earth. Why? Well, if Earth and Armageddon isn't that bad then we could repair Earth of its damage. For example, we all know that materials and power can fix things up, right? Well, once we are on Saturn we can collect the materials and power, then we can all fly back to Earth, clean up the damage and then we won't have a Armageddon for a few million years. But NASA and other space companies really want to get to Mars. By 2027 we will have accelerated jet propulsions that can fly faster than 250,000 mph, but don't engage warp drive immediately or we'll all get crushed. (We will have to accelerate to avoid getting crushed.)

That is why I believe that we should terraform Saturn instead of Mars.

# The simplest way

... to add healthy snacks to lunch boxes

Snacks are an important part of a healthy diet for active children. Kids have little tummies + they need small amounts of food often.

Try these simple + healthy snack ideas in your child's lunch box:

- Poppletana: Plain air-popped popcorn (without salt or butter) mixed with sultanas + dried apple
- Dried fruit snack packs: buy them ready made, or make your own at home in reusable containers
- Fruit salads: buy small tubs of diced fruit in natural juice, or cut up small pieces of fruit + make your own!
- Crackers + veg: Slice up some avocado or tomato + send with some rice crackers
- Little veggie bags: cherry tomatoes, capsicum, carrot and celery sticks
- Frozen fruit bags: freeze grapes, orange quarters or strawberries + then send to school!

Remember: kids love small portions, so cutting up fruit + veg will help make sure they don't bring it home at the end of the day!
